

Grey's Nocturnal Critter Plush

Have you ever wanted to be comforted by a cuddly critter and then haunted by its horrifying red eyes as soon as the lights go out? Now you can!

When the light sensor detects darkness, two red eyes will light up. As an additional feature, if you “pull” its tail (push a button) it will “scream” via the buzzer.

Materials
2 LEDs
1 Arduino
1 LiPo battery
1 Buzzer
1 Button
1 Opossum plush
Conductive thread
Thread, scissors,
needle

(I found a plush to buy, but if Iris finds any cheap ones I'd be interested)
